

Session Savepoint - Personal Vault Project

This document captures the current state of your work with ChatGPT so you can easily resume later.

1. Current Status

- Explored hosting options (GitHub Pages, Netlify, Cloudflare Pages) for your Personal Vault.
- Built a starter Vault HTML file with real document names.
- Discussed long-term strategies for organization and growth.
- Established the preference for numbered lists and direct, clear language.

2. Open Decisions

- Choose a hosting platform (GitHub Pages, Netlify, or Cloudflare Pages).
- Decide whether to create a Working Agreement document to formalize assistant language and roles.
- Determine if you want to immediately organize the first batch of files for upload.
- Plan for potential migration if starting with Netlify.

3. Suggested Next Steps

1. Choose a hosting platform and start basic setup.
2. Create a simple Working Agreement document.
3. Organize a list of initial documents for Vault upload.
4. Build a basic migration plan if starting with Netlify.
5. If needed, pause to review and update project master checklist.

4. Notes

- Stick to numbered lists for decision-making.
- Phrase choices and suggestions clearly, avoiding implied 'team' language unless specified.
- When resuming, you can upload or reference this Savepoint to quickly re-establish project context.
